Germany | REIFF Technische Produkte

REIFF Technische Produkte offers free live webinars

What are the influencing variables for sealing systems? How are PU timing belts manufactured and how do various types of plastic differ? Answers to these questions can be found in the free live webinars of REIFF Technische Produkte.

The industry development partner currently offers various webinars in the fields of plastics technology, sealing technology and timing belt technology. More are already being planned. The number of participants is limited to 20 persons each, according to the motto: "First come, first served". The 30-minute online training sessions provide additional time for direct exchange with the experts. Questions can also be asked anonymously in the chat during the training.

The first webinars on "Hoses in the food industry" and "Basics of adhesive technology" were very well received by the audience. Moderator of the live training courses Holger Mende is pleased about the many positive voices: "It is nice to hear that our webinars offer real added value. Through the exchange with REIFF experts, questions and problems can also be discussed directly afterwards".

But REIFF experts are not the only speakers. Cooperation partners also accompany the live webinars. The hose technology webinar, for example, took place in cooperation with Continental.

All current dates and topics of the REIFF Academy can be found on the website of the Reutlingen-based technology specialist: <https://www.reiff-tp.de/newsroom/webinare>. If you don't find the time for the live dates, you can also watch the recordings afterwards.

Spain | Gasso Equipments

BOTTOM LOADING ARM FOR LNG

Gassó Equipments SA has developed its first LNG loading arm for an important Spanish LNG Company project in Barcelona who looks for a safer and faster and with a long reach solution in their unloading LNG operation.

This loading arm is especially designed to load LNG products and is suitable for the bottom loading / unloading of road or rail tankers. It is suitable for applications where tanker connection flange cannot be accurately positioned.

Sizes: DN50, DN80 and DN100
Material: SS316
Balance: Linear Spring Cylinder

CRYOGENIC SWIVEL JOINTS

Cryo Gassó Stainless Steel Swivel Joints are designed for extreme cold applications (- 196 C°) for an instant and fast start to transfer equipped with an interchangeable bearing module.

The balls raceways are purged with nitrogen to avoid ice formation during cool down process instead of normal grease lubrication.

Netherlands | Imbema Groep

Imbema develops its own brand CLETON for hose assemblies

Imbema Cleton is a company of the Imbema Group. However, the name Cleton has been an established name for decades in the industry when it comes to high end hose assemblies. When you say Cleton, the industry says: reliable, innovative and high quality.

In 2019 Imbema started developing its own brands. In addition to the well-known brands Rhiwa and SBS in vehicle technology and Impro in surface treatment, Imbema developed Cleton as a brand. Cleton stands for reliability, high quality and innovation. The very best in hose assemblies, hoses and couplings.

For more information, visit www.imbema.com/cleton

Rhiwa Easy Aero roof ventilator conquers van market

Rhiwa Easy Aero is a by Imbema in-house developed unique roof ventilator. It provides healthy ventilation and removes moisture, harmful gases and heat from a company vehicle! The push and pull technology creates powerful air circulation. The unique thing about the Easy Aero is that it doesn't require separate floor drainage, which not only saves a great deal of work, but also prevents serious damage to your company vehicle's exhaust, wiring and braking system. Easy to use, install and maintain.

Benefits of the easy Aero:

- Sustainable to use, doesn't require any electricity and the roof ventilator is fully recyclable.
- Easy to assemble as it can be installed in your company vehicle in just three easy steps.
- Has a high capacity as the push and pull effect of the Easy Aero roof ventilator results in an output of 70 m³ per hour.
- Made of strong plastic and less fragile because no rotating parts have been used. Shockproof, virtually silent and suitable for going through the car wash.
- The geometry negates the need for floor drainage, in contrast to traditional roof ventilator models.
- Instead of rotating parts, push and pull forces have been incorporated into a single model.
- Fits both under roof racks and in convertibles.
- Adjustable ventilation strength.

Since its introduction in 2019, the Easy Aero is conquering the market for vans and small trucks. Owners of such vehicles choose Easy Aero above other mechanical roof ventilator.

The Rhiwa Easy Aero roof fan is a product by Imbema. For more information visit our special website www.easy-aero.com.

Poland | Tubes Int.

Tubes actions to protect the health and safety of its employees and customers

During that extraordinary and unprecedented time with Covid-19 pandemic impacting the world, Tubes International as a responsible organization implements actions to protect the health and safety of its employees and customers.

Our branches are open all the time, but still we advise the customers to contact Tubes by phone, e-mail and to use our online store - <https://sklep.tubes-international.pl/>

We also host web conferences to meet our customers or branch staff via the Internet:

When lockdown restrictions were first introduced, we installed special PVC protection screens in the entrance to our stores.

The customers could enter the store but only a few steps into. There were hand sanitizers and information regarding Covid- 19 available in that special zone.

When the Polish Government announced partial lifting of the restrictions, we decide to open our stores a little bit more. We adapted our salesmen stands to the new requirements and moved PVC screens to their seats.

Thanks to those measures, the staff is safe and Tubes International continues to serve its customers in that hard pandemic time.
